Time Line Worksheet

Fill in the boxes with the names of the samples in the order they form. On the line next to each box, write something you noticed about that sample. Is it soft or hard? Is it in one piece or many pieces? What color is it?

First.....

It starts as ________________________________________

Next.....

It sinks and becomes ________________________________________

Then.....

It loses water and is called ________________________________________

Then.....

After getting buried and some chemical changes, it is ________________________________________

And

Finally.....

It gets really hot and squeezed and ________________________________________
